

Inviting *Invigorating* INSPIRING INGENIOUS Invercargill!

MAKE IT HAPPEN ENGINEERING CADET

Making things happen is what engineering services is all about, but WOW, what an opportunity to make things happen in your life too!

Engineering services are the Council's engineers, providing technical design and engineering assistance across a broad array of areas including roading, drainage and water mains. You've seen us. We're the bods in orange jackets, theodolites in hand, keeping contractors on track – making sure things happen as they should.

As one of our engineering cadets you'll be hard placed to get a better grounding in engineering. Working on a wide variety of projects you'll see things through from start to finish, being involved at every phase – drawing and design, managing contracts, co-ordinating contractors, implementation and sign off.

It's likely you'll have, or be about to complete, Level 2 or 3 NCEA with a strong showing in design, sciences and maths and a bent for things technical. Working here you'll be able to learn and earn, combining work with study. We give you the time off to study as well as helping towards the costs of training!

Make it happen for you, for us and the city in which you and your family live. To find out more call Russell Pearson – Engineering Services Manager on (03) 211 1645. Applications close on Thursday 12 November 2009.
